

YOU-GET

AUTOMATE YOUR IBM BPM TESTING WORK

The You-Get AppTester is a complete testing tool that cuts costs by automating a large part of the testing work. The quality of releases is guaranteed as it runs through and records testing scenarios and cases automatically. Launching new releases becomes cheaper and faster since manual execution is no longer necessary. This drastically lowers the risk of mistakes in a release after Go Live.

Currently, the You-Get AppTester is the only application able to automate your IBM BPM testing. The graphs show how the number of testers, time and costs are predictable and easy to monitor.

BENEFITS

Development time and testing efforts are balanced through:

- ▶ Automated testing
- ▶ Centrally recorded test cases
- ▶ Simplified release-management
- ▶ Less testing efforts relative to development efforts
- ▶ Lightweight set-up (no need for powerful work station)
- ▶ AppTester's specific design for IBM BPM

Number of Testers & Project Time

Testing Time & Project time

▶▶ TECHNICAL DETAILS

The You-Get AppTester is an Eclipse application that allows creation of test projects with test scenarios and cases. It is based on an IBM BPM process application. These cases are executed on a BPM environment of your choice that runs the process application. Test projects can be stored centrally and managed by using the Git or Subversion integrations.

Combining experienced testers and a You-Get AppTester brings a multitude of advantages. It allows you to test your projects and bring them live flawlessly.

The Advantages of combining Human Testing & The You-Get AppTester

- ✓ Determine what process paths are most important for daily use
- ✓ Manually creating, executing and documenting test scripts step by step
- ✓ Help business users get familiar with the process
- ✓ Discuss errors with business and developers

- ✓ Unit and regression test on all your services and processes
- ✓ Automated functional acceptance tests
- ✓ Automatically download and analyze your snapshot into your test project
- ✓ Automatic creation and execution of all possible test scripts
- ✓ Display results in automatically generated test reports
- ✓ Define inputs and outputs for unit testing of: Human, AJAX, and System Services
- ✓ Version control, replay old versions and the option to import/export test scripts
- ✓ Use cross-browser testing on your coaches
- ✓ Administration of test users and working from a shared repository
